14.00 Transfer from Volendam to Zaanse Schans

14.30 Visit to Zaanse Schans

16.15 Transfer back to Delft

17.30 Arrival in Delft

## Excursion 4: Visit Royal Cosun Dinteloord & OMR Moerdijk

*(time to be confirmed)*

Royal Cosun is an agri-industrial group firmly rooted in the primary sector. The businesses that belong to Cosun are Aviko, Duynie, Sensus, Suiker Unie, SVZ and Cosun Biobased Products. They produce food ingredients and products that make their way to the food industry, foodservice sector and retail channels. In addition, the group is increasingly focusing on components for non-food applications.

Cosun's ambition is to get the most out of its raw materials: this is good for the environment, profitability and meets society's demand for responsible products and production methods. The Cosun businesses also supply products to the animal feed sector and residual products are used to produce biogas.

Royal Cosun was established nearly 120 years ago by Dutch sugar beet growers who united themselves in a cooperative. Today, the cooperative has some 8,800 member/shareholders and has grown into a business with 3,900 employees [in FTE] and a group turnover of about €2 billion annually.

---

**OMR** processes organic materials (food waste) to green electricity and heat using a biomass fermentation. Bacteria live in the biomass fermentation set-up, these bacteria eat the organic waste to produce biogas. This biogas is a fuel for heat and power (CHP) with which the electricity is produced along with residual heat. Until the end of 2000, the commodities were used as animal feed. However, new regulations has prompted the OMR to an alternative market for these resources. OMR turned towards a useful, sustainable and innovative solution for these materials.

The heat produced from the raw material which are no longer suitable for food and feed is reused for heating purposes, both internally (sister companies) and externally (adjacent businesses). A loop has been constructed with the means of moving the heat from the process, to the companies requiring the heat. The products can be delivered by various means of transport, (un)packed in trash, or in bulk containers.

## **Excursion 5: Visit RWZI (Water Treatment Plant) Amsterdam West**

*(More information will follow)*
